-1- FUNCTION: Stimulator of protein export for NES-containing
-1- FUNCTION: Also plays a role in the nuclear export of UI snRNA,
-1- SUBUNIT: Preferentially binds Ran-GTP. Associates with NXF1, NXF2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FFEMLPSSEFOISVVDCOPVHDEATPSOTTVLVVICGSVKFEGNKQRDFNQNFILTAQAS 120

"NXTI (p15) is a crucial cellular cofactor in TAP-dependent export of
intron-containing RNA in mammalian cells.",
Mol. Cell. Biol. 21:2549-254(2001)
-1-FUNCTION: Stimulator of protein export for NES-containing
proteins. Also plays a role in the nuclear export of ul snRNA,
tRNA, and mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                              SUBUNIT: Preferentially binds Ran-GTP. Associates with NXF1, NXF2 NXF3 and NXF5.
                                                                      "RanGTP-binding protein NXT1 facilitates nuclear export of different classes of RNA in vitro."; "Appl. Cell. Biol. 20:4562-4571(2000).

-1- FUNCTION: FACILITATES PROTEIN TRANSPORT INTO THE NUCLEUS.
INTERACTS WITH THE NUCLEDRORIN P62 AND WITH RAN. ACTS AT A
INTERATIVELY LATE STAGE OF NUCLEAR PROTEIN IMPORT, SUBSEQUENT TO THE
INITIAL DOCKING OF NUCLEAR IMPORT LIGAND AT THE NUCLEAR ENVELOPE.
COULD BE PART OF A MULTICOMPONENT SYSTEM OF CYTOSOLIC FACTORS THAT
ASSEMBLE AT THE PORE COMPLEX DURING NUCLEAR IMPORT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

T. "Sequence and analysis of chromosome 1 of the plant Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nature 408:816-820(2000).

-I- FUNCTION: FACILITATES PROTEIN TRANSPORT INTO THE NUCLEUS. COULD BE PART OF A MULTICOMPONENT SYSTEM OF CYTOSOLIC FACTORS THAT ASSEMBLE AT THE PORE COMPLEX DURING NUCLEAR IMPORT (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: CYTOPLESMIC (BY SIMILARITY).

-I- SIMILARITY: CONTAINS 1 NTF2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 63 EMLPSSE--FQISVVDCQPVHDEATPSQTTVLVVICGS--VKFEGNKQRDFNQNFILTAQ 118

"Characterisation and chromosomal location of G3BP-1 and G3BP-2a/b,
members of a novel SH3 domain-binding and RNA-binding protein family
implicated in signal transduction.";
Submitted (APR-1999) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3 SVDFKTYVDQACRAAEEFVNVYYTTMDKRRRLLSRLYMGTATLVWNGNAVSGQESLSEFF 62

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
